

Exact Jet

DESCRIPTION

ExactJet is a specially coated polyester film that accepts inkjet ink without smearing. ExactJet quickly dries to produce a waterproof film positive. Water resistance is an important feature to have in a film positive considering the damp environment typical of the screen preparation area of your shop.

ExactJet provides a cost effective alternative to having your artwork done by expensive outsourced professionals. ExactJet allows any image to be transferred directly from your computer to film. The result is a durable, waterproof film positive that can be used as often as required by your printing runs.
