

Marabu-Color Dispenser Compact

To meet the needs of exact custom color reproducibility, Marabu extends its range of highest quality ink dispensing systems with the new small format version, MCD-Compact. While the MCD's automatic handling serves several printing machines at the same time, the MCD-Compact is the solution for companies with limited space.

Highlights

- Compact format
- Ecological re-use of containers
- User-friendly maintenance
- Marabu-ColorManager driven
- Accurate and fast
- Easy tank filling without the need for special tools
- Tank sealing design

The MCD-Compact is an easy-to-handle production system offering the same accuracy of 0.1g as its big brother, the MCD. The all stainless steel design and the comfortable filling height of the containers ensure user-friendly service. Additionally, the specially designed tanks prevent air entering the dispense lines, eliminating the chance of ink spray. Ink dispense is controlled by the new MCM software, which has additional features and a simple user interface.

MCD-Compact: simple, accurate, compact.
