

Marabu-ColorDispenser

As a state-of-the-art formula dispensing system, the Marabu-ColorDispenser (MCD) offers unrivaled efficiency by accelerating ink mixing and reducing operator time. The MCD includes an automatic handling system minimizing operator attention while providing a continuous dispense of ink. Rather than the restrictions of an off-the-shelf concept, the industry specific designed MCD can be tailored to your needs.

Highlights

- Time efficient automatic handling system
- Ecological re-use of containers
- User-friendly maintenance
- Marabu-ColorManager driven
- Accurate and fast
- Design freedom

Flexibility in design with efficiency in operation.

Marabu-ColorDispenser

Time Efficient Automatic Handling System

The automatic handling system allows the operator to queue various custom colors to the MCD where the ink is automatically dispensed and returned as a filled container. So long as filled containers are replaced with empty ones, the process continues uninterrupted. This function dramatically reduces operator dispensing time, allowing more time for press set-up.

Ecological Re-Use of Containers

A highlight of the system is the re-use of previously filled containers. Whether the container is empty or contains residual ink, the EAN (Bar Code) reader scans the label, recalls the same formula, and redispenses the missing quantity. This ecologically-friendly function significantly reduces disposal costs.

User-friendly Maintenance

Aligned in a linear configuration at a working height, the MCD is easy to fill and maintain. The automatic valve cleaning system ensures the MCD stays clean.

Marabu-ColorManager Driven

The popular Marabu-ColorManager database is integrated into the MCD minimizing formula storage to one simple system. With a high degree of reproducibility, formulas already provided need simply to be recalled, and the machine runs itself.

Marabu Drum Dispense Unit

Increase ink mileage, reduce ink storage space and disposal of messy containers with the Marabu Drum Dispense Unit. For high volume colors, simply connect a drum of ink to the unit and dispense into an easy-to-handle 1 Kg container. Lined with a removable plastic in-liner, all purchased ink can be utilized by pressing residual ink into the next drum. Space, waste, and time savings with an ecological benefit.
